

Digital Innovation Skills Helix in Health

What is DISH?

The Erasmus+ DISH project addresses the challenge of the **digital skills' gap** of the **health & care staff** by establishing a **triple helix partnership** consisting of **health & care providers, educational institutions** and **enterprise representatives** in each of the **six countries** piloting the project's results.

The Goal

The Erasmus+ DISH project addresses the challenge of the digital skills' gap of the healthcare staff by establishing a triple helix partnership consisting of health & care providers, educational institutions and enterprise representatives in each of the six countries piloting the project's results.

The Challenge

- ▶ eHealth solutions aim at supporting health & care professionals in their duties, streamlining processes, empowering patients to better participate in their own health, and enabling carers to deliver improved services.
- ▶ However, these solutions do not reach their maximal potential. There is often a lack of digital skills and innovation readiness required to make solutions work and secure adoption.

Committed to improving healthcare

Results and Outcomes

- ▶ The **"Planning and Implementation"** process tool, in which various stakeholders collaborate to define and describe concrete implementation challenges and innovation needs and express these into concrete training needs and potential solutions based on a shared decision making process.
- ▶ The **"On-the-Job Training"** process tool, in which health & care professionals can complete practical and well-structured training that promotes real, work-based learning in secure environments.
- ▶ The **"Assessment and Recognition"** process tool, in which health & care professionals undergo ongoing evaluations before, during, or even after training, and receive recognition and possible validation for their acquisition of competencies, skills, and knowledge.
- ▶ **600 health & care staff members** participated across the 6 DISH pilot countries.
- ▶ A **sustainability and sector skills strategy** targeting both EU care providers and public authorities to guide the DISH results' uptake after its end.
